South West  
Healthcare

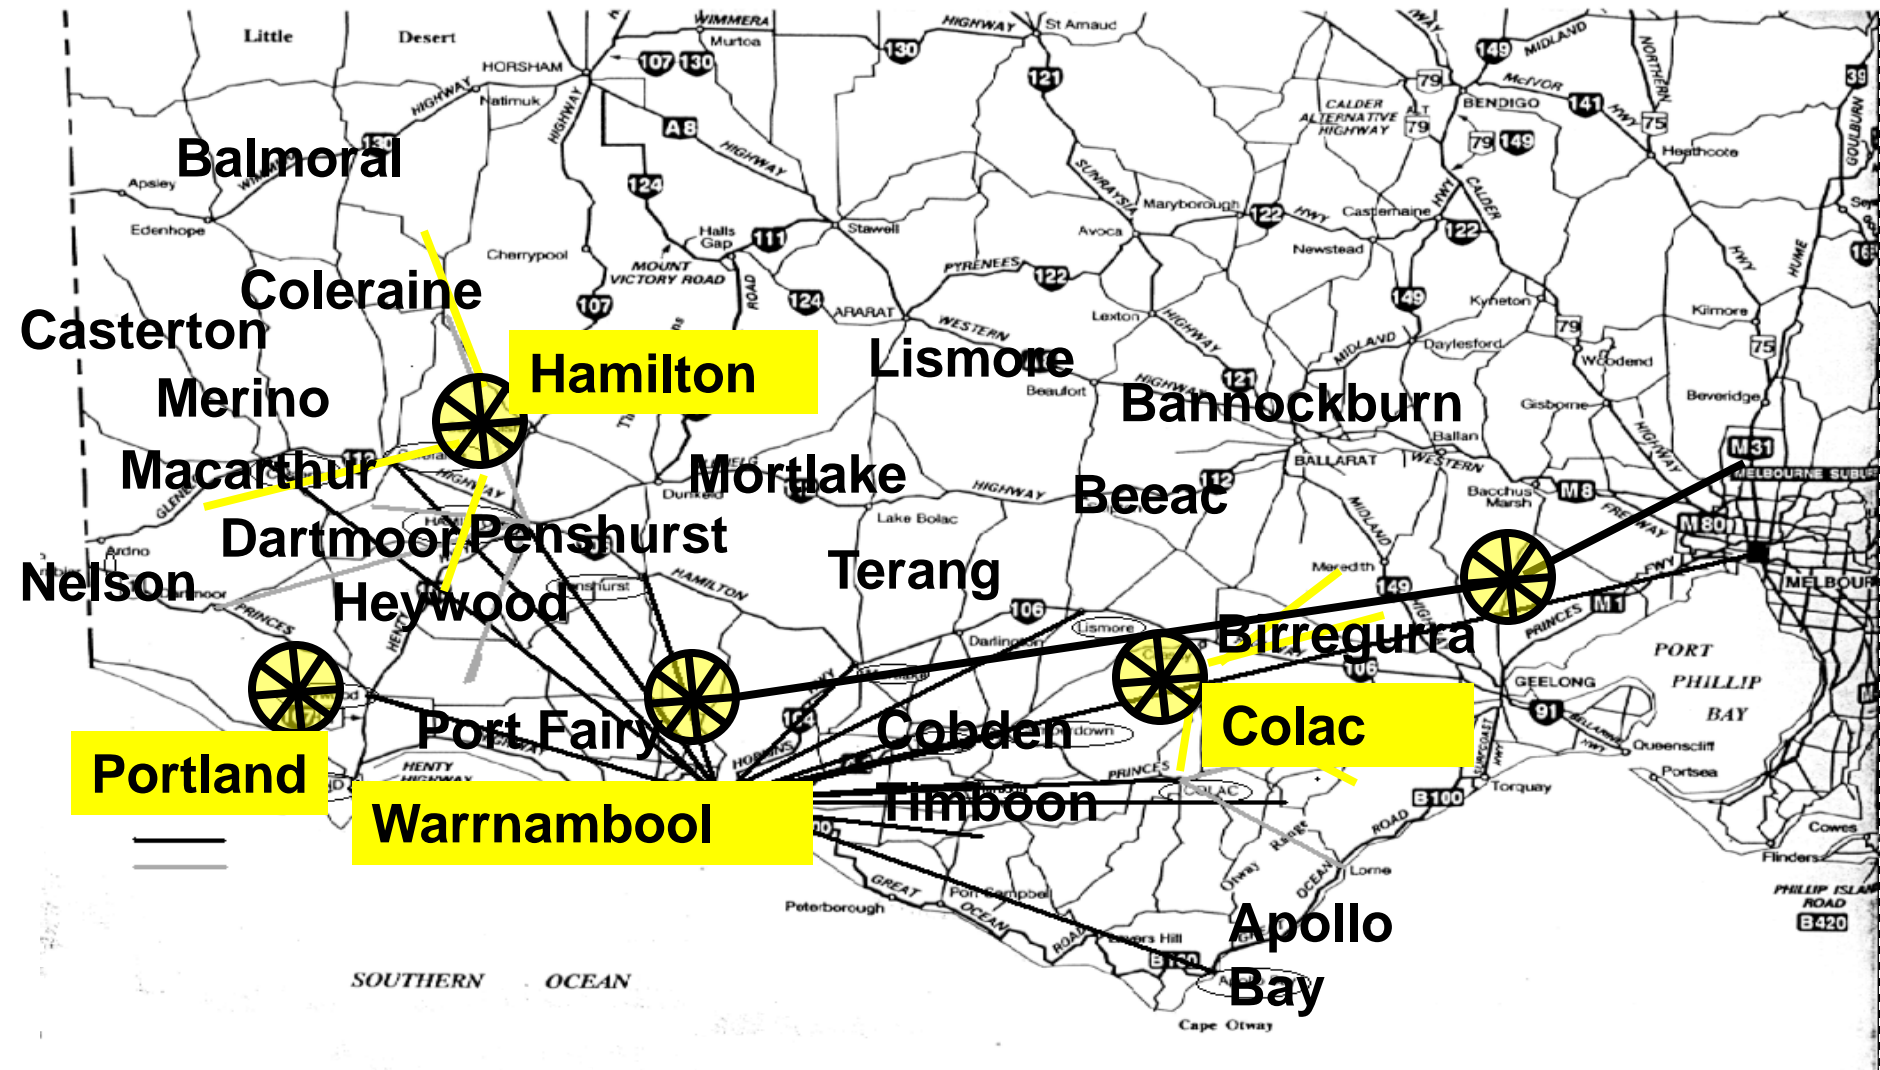

# SWARH FMIS

- Basic assumption
  - Oracle was a FMIS that was fundamentally designed to cater for large organisations
  - Region wide approach was required to gain longer term benefits and payback from the system
  - Avoid duplication of time and effort where possible
  - Some centralisation of functions was required
  - Benefits and costs to be shared equitably
- Key challenges
  - To ensure the most efficient model was considered and if agreed implemented
  - ***To achieve any “region wide benefits” buy in was required from all agencies***

# The SWARH Members

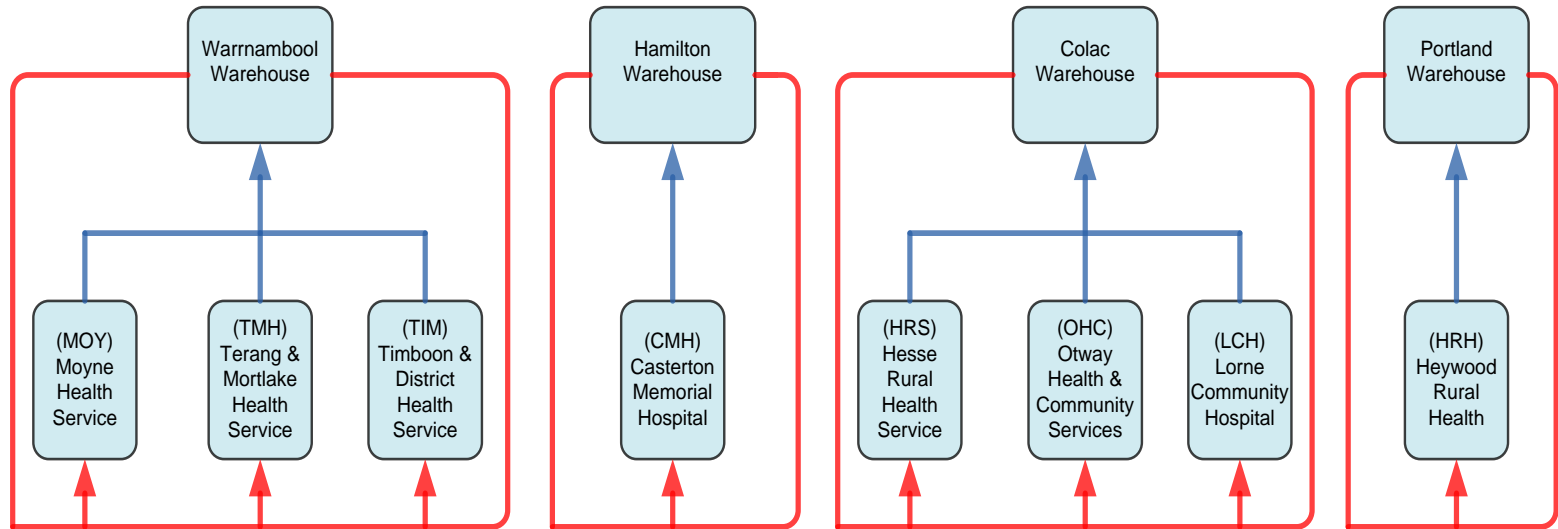

## South West Cohort – Oct 2013

# Original

# Supply

## Organisation Supply Structure

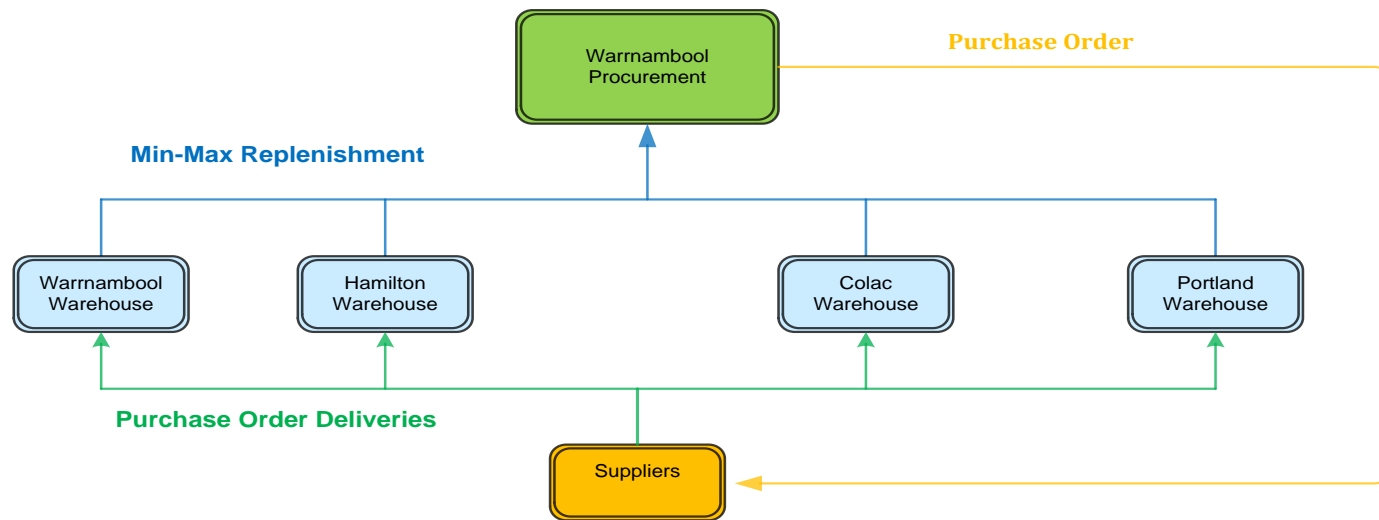

**Supply Request**

**Supply Delivery**

# Centralised Supply Model

# What has been achieved

## *Only rural alliance to implement a centralised supply model*

- One catalogue across all agencies
  - Significant savings and efficiencies v decentralised model
  - Centralised purchasing skill set
- Improved inventory control and purchasing practices
  - Sharing of stock
  - Centralised system maintenance
  - Improved buying power
- First agency in Victoria to implement Business to Business (B2B) transactions (in partnership with Melbourne Health)
  - Stationery Punchout, Health Information forms, Food Services, Prosthetic Ordering
- Opportunities for small agencies
